

NGUYEN TIEN LONG

GAME DEVELOPER & TECHNICAL ARTIST

Game Developer & Technical Artist with 4+ years building cross-platform games in Unity and Unreal Engine. Specialized in real-time shaders, VFX pipelines, and internal tooling that reduced production time by 80% and reduce risk. Passionate about pushing visual quality and pipeline efficiency

Skill

Language

C/C++/C# Python JavaScript HTML Java Assembly

Shading Language

ShaderLab Shader Graph HLSL GLSL CSS

IDE & Engine

Unity Unreal Engine UEFN DirectX OpenGL VS Code Visual Studio Rider

Tool

PhotoShop Maya Blender Substance Designer Substance Painter

Jira Notion Trello Asana Linear

Git Github Gitlab BitBucket GithubProject Jenkins

Principle

OOP ECS Game DesignPatterns KISS DRY SOLID YAGNI

Experience

Game Developer cum Technical Artist- Yield Guild Game

Nov 2024 - Now

Full-time: On-Site: Ho Chi Minh City

- Developed games and internal tools to optimize production workflows.
- Designed and implemented automation tools that reduced production time by up to 80% while mitigating risks from human factors, covering import/export workflows, data and asset management, debugging, and testing.
- Provided technical support and troubleshooting across 2D, 3D, and VFX teams to resolve pipeline and in-engine issues.
- Created custom shaders for in-game visual effects, including shading models, displacement, procedural patterns, and mathematically driven effects.
- Identified platform constraints and asset-to-runtime issues, proposing effective solutions to enable optimal technical and visual outcomes for each scenario.
- Collaborated closely with Game Designers to develop special gameplay mechanics and enhance overall player experience.

Game Developer - INDI GAMES

Jun 2022 - Apr 2024

Full-time: On-Site: Ho Chi Minh City

- Developed games using the Unity Engine, Unreal Engine.
- Designed game shaders, utilizing ShaderGraph, ShaderLab, HLSL, and GLSL.
- Wrote Unity Editor tools, level design, game data management, testing, and debugging.
- Expand gameplay and port existing projects from Mobile and PC to WebGL.
- Collaborated with a Game Designer to customize game levels and improve gameplay.
- Created games using both Unreal Engine 5 and Unreal Engine for Fortnite using Verse.

Trainee Game Developer - INDI GAMES

Apr 2022 - Jul 2022

Full-time: On-Site: Ho Chi Minh City

- Gained expertise in the entire game development lifecycle.
- Utilized Git, GitHub, and GitLab for seamless team collaboration.
- Developed mini-games using Unity Learn to hone skills.
- Engaged in game development training courses.

Project

Match 3 Game - Unity Engine

<https://buciupi.github.io/match3-game-build/>

Match 3 games involve swapping adjacent tiles to create lines of three or more identical pieces. As you match these tiles, they disappear, allowing new ones to fall into place.

- Designed scalable gameplay systems supporting rapid creation of new mechanics.
- Built an effect manager using object pooling to handle multiple pools efficiently.
- Created in-game VFX blending between Particle System, Animator, and Sprite Rigging.
- Developed Unity Editor tools for data import, level design, testing, and debugging.
- Collaborated with game designers and 2D artists to optimize levels and gameplay.

Shader - Unity Engine

<https://www.behance.net/gallery/205082547/Unity-Shader>

- **Shader:** VFX Graph, Particle System, Shell shading, Toon shading, Pixelation
- **Language:** Shader Graph, ShaderLab, GLSL, HLSL

Shader, Custom material - Unreal Engine

<https://www.behance.net/gallery/210400295/UE5-Shader-Custom-material>

- **Shader:** Vertex displacement, Texture packing, Interior mapping, Toon shading, Tessellation
- **Post Processing Effects:** Blur, Color filtering, Underwater effect, Lens masking

Render Pipeline, Computer Graphics, Shader - DirectX 11

<https://www.behance.net/gallery/210403657/Direct-11-Render-Pipeline-HLSL>

- **Rendering Pipeline:** Forward rendering, Deferred rendering, PBR lighting
- **Shader (HLSL):** Vertex, Compute, Geometry, Pixel, Tessellation
- **Techniques:** Vertex displacement, Texture packing, Basic lighting, Terrain rendering, GPU instancing, Occlusion culling, Stencil buffer, Billboard rendering
- **Post Processing:** Blur, Ambient Occlusion, SSAO

Education

Bachelor of Software Engineering

HO CHI MINH CITY UNIVERSITY OF TECHNOLOGY - HUTECH

GPA: 3.26/4 — 2018-2023
